DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-4, 6-16, and 18-22 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 11 of U.S. Patent No. 7,200,344 in view of the combination of Kitajima (U.S. Patent No. 5,515,196), Du (U.S. Patent No. 6,417,958), and Ohya (U.S. Patent No. 6,556,327) or the combination of Bergano (U.S. Patent No. 6,310,709), Du (U.S. Patent No. 6,417,958), and Ohya (U.S. Patent No. 6,556,327). Although the conflicting claims are not identical, they are not patentably distinct from each other because the '344 patent recites nearly identical limitations regarding the formation of the WDM signal with the same minimum channel spacing claimed in the independent claims of the instant application. The '344 patent differs from the claimed invention in that it fails to specifically teach that the WDM

signal is amplified with combination of-launched amplification signals. However, the examiner maintains that the combination of references cited in the final rejection affirmed by the BPAI continue to meet these limitations. As such, the combination of U.S. Patent No. 7,200,344 and the references cited in the affirmed final rejection obviate the limitations of the claimed invention as amended.
